

TPW SYSTEMS

SEPTIC TANK SOLUTIONS

Full turnkey service for new builds & upgrades for both domestic and commercial customers

EN 12566-3

EuroTank^{CE} TER 3

Robust precast concrete construction, customisable to suit the specific requirements of each site

Compact, low-profile configuration, suited to restricted or small sites and reducing excavation footprint

Includes fibre-safe, cleanable media bags for pre-cleaning, helping to trap residual solids and grease before final percolation

Provides superior effluent quality: significant reductions in BOD, COD, suspended solids, nutrients and pathogens

Low maintenance, with easy access via removable lid and straightforward servicing requirements

EuroTank^{CE} TER 3

Eurotank TER3 is a precast-concrete, packaged tertiary percolation unit designed to polish effluent from a secondary treatment system. It is PIA-certified under EN 12566-3 / NSAI SR66 (and EN 12566-7 for tertiary units), compliant with the EPA Code of Practice 2021.

TER3 comes in two sizes, P6 and P8, these can be combined and work together for any size system required.

It delivers very high-quality final effluent significantly reducing BOD, COD, suspended solids, nutrients and pathogens.

KEY FEATURES

- Integrated flow-distribution system ensures even polishing across the entire media bed
- Built to tolerate fluctuating hydraulic loads without compromising effluent quality
- Simplified internal layout for quick inspection and easy maintenance access
- Reinforced concrete design provides resistance to groundwater pressure
- Delivered as a fully assembled tertiary unit for rapid on-site installation

Design – tailored systems for site

Installation – efficient, hassle-free setup

Supply – high-quality products delivered

Service – ongoing support and maintenance
